X8 fitted to the incoming mains water supply pipe, after the stopcock.

"Having the X8 on my main water supply since November has been very helpful. I am no longer having to buy expensive limescale cleaning products from the shops for my kitchen and bathroom appliances. Limescale products from the shop were becoming very expensive for me as a student because I have to continue buying them all the time.

When I was introduced to the X8 water conditioning product, considering the many benefits, I did not hesitate and bought it straightaway. **The X8 is doing a much better job on my washing machine, dishwasher, kettle, drinking tap water, WC, iron etc, and is helping to protect my boiler, with no additional costs to me.**

With the savings, I have bought the X1 for my boiler and noticed great savings also. My house gets warm quicker and I am saving a lot. **£20 in my key meter used to last 5 days but having the X1 on my boiler now means that £20 lasts an additional 1½ days for the same level of usage.**

I have recommended X1 & X8 to some of my friends and when we talk on the phone they always express great savings and benefits they are having using the products."

Julia (Student)
